Earth Fault Overcurrent Relay

NPIH800R

NPIH800R (R2 case) is dedicated to the refurbishment of 700 and 7000 series (R2 case) of CEE earth fault overcurrent relay providing the detection of zero-sequence currents of medium and high voltage electrical networks. This numerical and multi-function relay supervises in particular the phase to earth faults and the good operation of the circuit breaker and its trip circuit.

NP800R relays provide monitoring, measurement and recording of the electrical quantities of the network. The relays can be set locally, using either the keypad and display or the RS232 port, or remotely using the RS485 port.

Two mountings are available, Flush Rear Connection (**EDPAR**) or Projecting Rear Connection (**SDPAR**). A blank cover R1, provide in option, can improve mechanical installation (replacement of CEE case R3 by a NPIH800R).

Setting, reading, measurement and recording are all available locally or remotely.
